Customer Segmentation Analysis

Project Overview

This project focuses on segmenting customers based on their behavior, demographics, purchasing patterns, and preferences. Clustering techniques are used to group customers with similar characteristics.

Key Features

1. Analyze customer demographics and purchasing behavior.
2. Perform customer clustering using Python and Scikit-learn.
3. Identify different customer segments.
4. Visualize clusters and key customer characteristics.
5. Generate useful insights for targeted marketing strategies.

Tools & Technologies

Python • Pandas • NumPy • Scikit-learn • Matplotlib • Seaborn • Jupyter Notebook

Expected Outcome

Gain practical experience in customer analytics, clustering, data visualization, and extracting meaningful insights from customer data.
